

# ANVI GOGIA

Patiala, India

☎ +91-79739-03569 ✉ [gogiaanvi@gmail.com](mailto:gogiaanvi@gmail.com) [in linkedin.com/in/anvi-gogia](https://www.linkedin.com/in/anvi-gogia) [github.com/Anvi-g](https://github.com/Anvi-g)

Interests: Systems Programming, Operating Systems, On-Device ML, Edge Computing

## Education

### Chitkara University

2024 – 2028

Bachelor of Engineering in Computer Science (AI & Machine Learning)

Punjab, India

- CGPA: 8.93/10

## Relevant Coursework

- Data Structures & Algorithms
- Operating Systems
- Computer Networks
- Distributed Systems
- Machine Learning
- Deep Learning
- Linear Algebra
- Database Management

## Intellectual Property

### Biometric-Secured Mobile Desk Companion and Surveillance System Patent App. No. 202611031552

AURI Deskbot | Indian Patent

Published May 2026

- Co-inventor of an autonomous deskbot patent (Journal 19/2026) featuring edge AI and privacy-preserving biometric authentication.
- Engineered an offline inference pipeline (face embeddings, MFCC voiceprints) and a TOFU protocol with Wi-Fi geo-fencing for physical security actuation.
- Analyzed prior-art patents to establish novel contributions in dynamic trust-scoring and context-aware privacy aversion.
- Qualified for Rs. 2,00,000 NewGen IEDC R&D grant via competitive pitch (unfulfilled); prototype currently in development.

## Projects

### Agentic AI Pipeline for Automated Data Cleaning | Google ADK, Scikit-learn, TensorFlow, REST APIs 2025

- Built an AI pipeline (Google ADK, TensorFlow) automating data cleaning and preprocessing for regression models on Kaggle datasets.
- Engineered scalable storage solutions to parse and transform high-volume structured data into optimized CSV and Parquet formats.
- Implemented asynchronous REST APIs bridging the ML backend with user-facing workflows, reducing manual preprocessing time by 70%.
- [github.com/Anvi-g/automatedEDA](https://github.com/Anvi-g/automatedEDA)

### Custom Arch Linux Environment Architecture | Arch Linux, Hyprland, Waybar, Bash

2025

- Configured a highly optimized Linux desktop environment from scratch using the Hyprland dynamic tiling window manager to maximize efficiency.
- Customized system telemetry using Waybar and integrated playerctl daemons for seamless background media service management.
- Developed Bash scripts to automate application autostart sequences and streamline routine system administration pipelines.

## Technical Skills

Languages: C, C++, Python, Java, Shell Scripting, SQL

Core CS & OS: Data Structures & Algorithms, Operating Systems (Concurrency, Memory Management), Networks

Systems, IoT & Edge: Linux (Arch/Debian), Linux Kernel Internals, Raspberry Pi, ESP32, MQTT

Machine Learning & AI: TensorFlow, PyTorch, Scikit-learn, Google ADK

Developer Tools: Git/GitHub, Docker, REST APIs, Django REST Framework, Flask

## Certifications & Achievements

Certifications: Azure AI-900, DP-900, AZ-900 | Google AI Agents Intensive | DeepLearning.AI ML Specialization (In Progress)

Achievements: Active competitor on Kaggle | NewGen IEDC R&D Grant Qualifier (Rs. 2,00,000 - unfulfilled)
